

Normal Distribution?

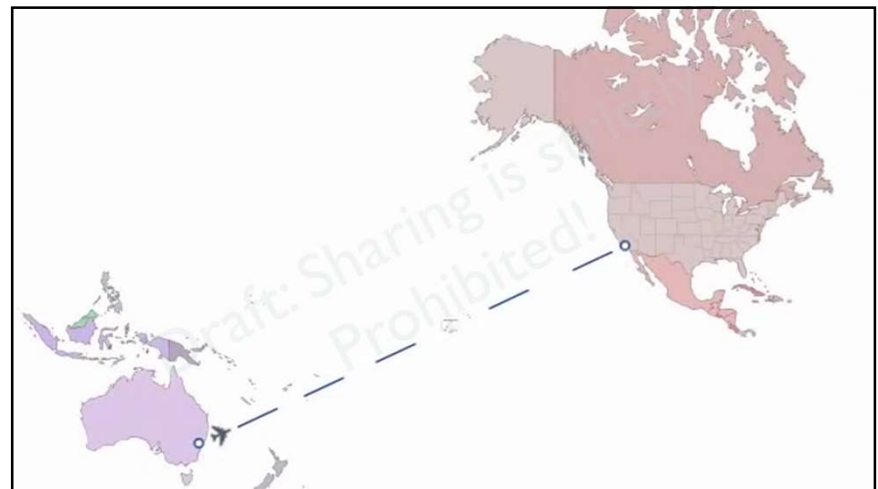

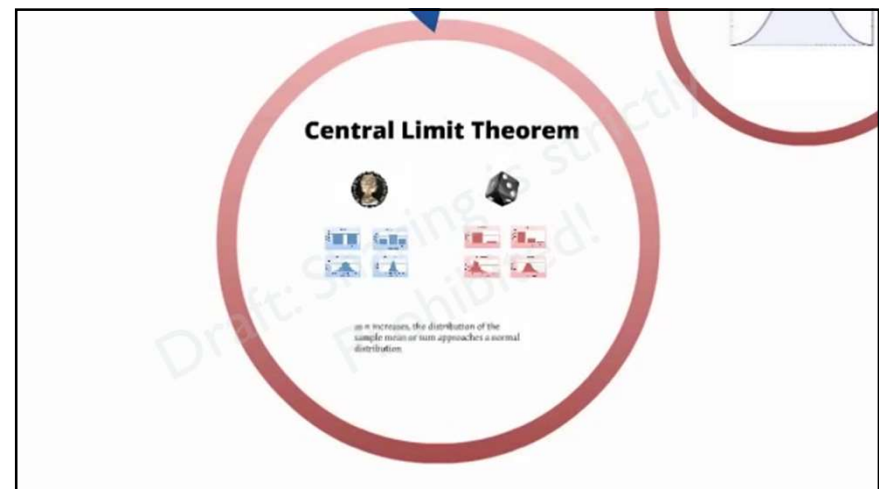

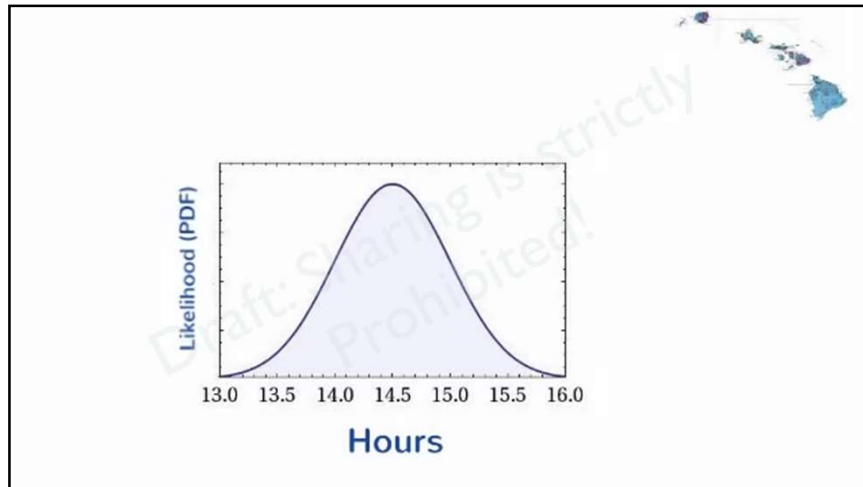

Definition

$$\text{PDF } f(x) = \frac{1}{\sqrt{2\pi\sigma^2}} e^{-\frac{(x-\mu)^2}{2\sigma^2}}$$

2 parameters μ σ

Examples

1 Coin toss

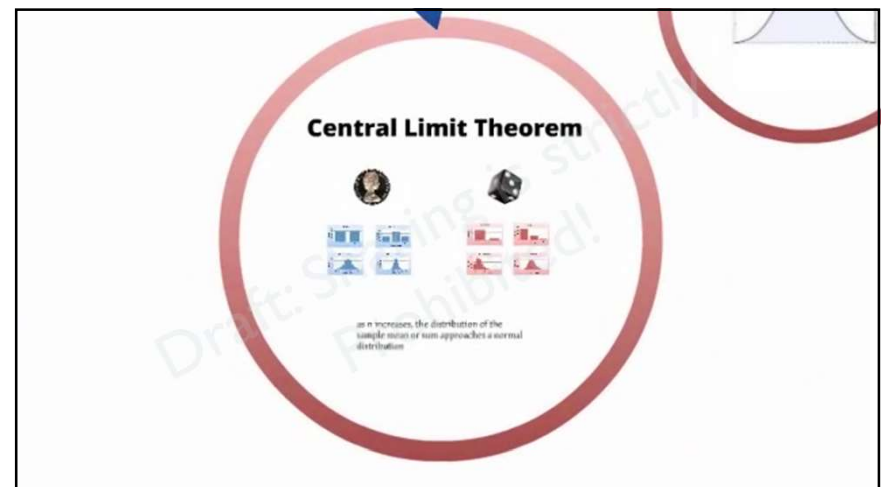

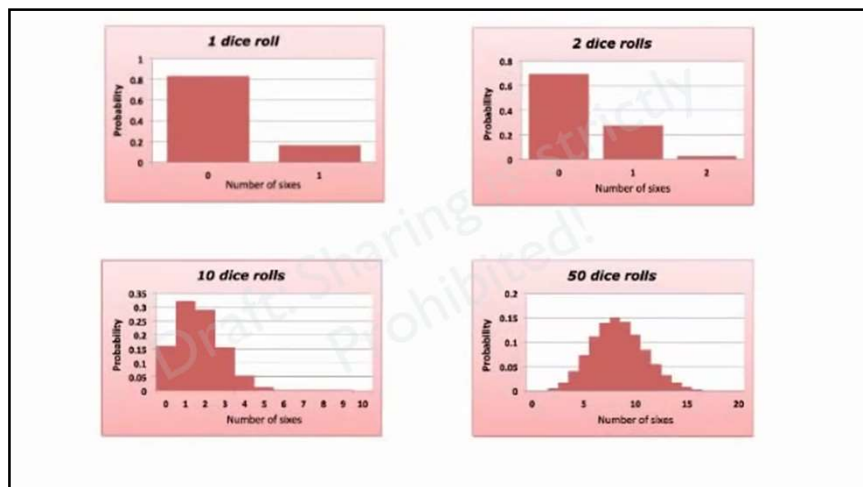

2 coin tosses

10 coin tosses

as n increases, the distribution of the sample mean or sum approaches a normal distribution

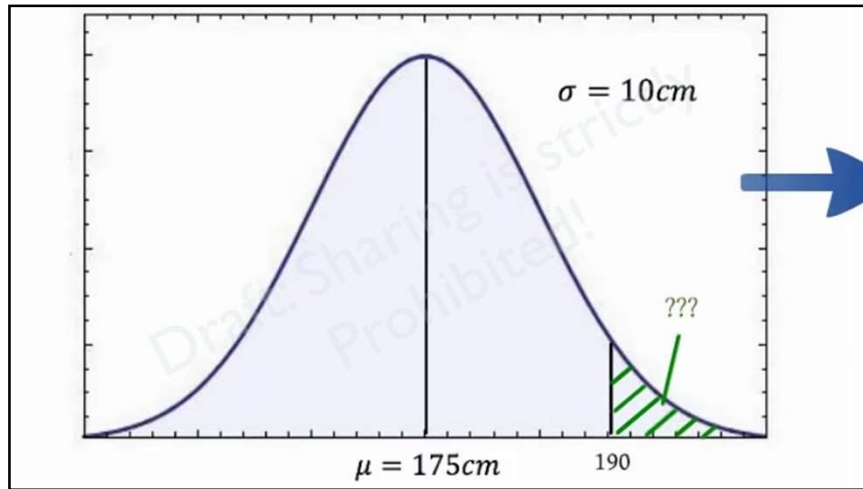

STANDARD NORMAL TABLE (z)

Entries in the table give the area under the curve between the mean and z standard deviations above the mean. For example, for $z = 1.25$ the area under the curve between the mean (0) and z is 0.3944.

z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09

$$Z = \frac{X - \mu}{\sigma}$$
$$Z = \frac{190 - 175}{10} = 1.5$$

A blue arrow points from the first slide to this equation, and another blue arrow points from this equation to the next slide.

$$P(Z > 1.5) = 0.067$$

$$P(\text{Height} > 190) = 0.067$$

THANK YOU!
